

Cardiac Arrest Standing Order

Special notes:

- Hypoxia
 - Airway Management
- Hydrogen ion or acidosis
 - 500cc fluid bolus
 - Adjust EtCO₂ to 40
- Hyperkalemia
 - Administer: Calcium Chloride 1gm IV/IO and Sodium Bicarbonate 50mEq IV/IO

ACLS Interventions

- Hypovolemia
 - 500ml fluid bolus
- Hypoglycemia
 - Dextrose
- Hypothermia
 - [Hypothermia SO](#)
- Tension pneumothorax
 - Needle decompression
- Trauma
 - Rapid transport

- Toxins:
 - TCA overdose, administer bicarb
 - beta-blocker or calcium channel blocker overdose, consider glucagon & cardiac pacing
 - Opiate overdose, consider Narcan

Patient Destination: Patients should be transported per [SAEMS Cardiac Receiving Center Triage Protocol](#)

* if transitioning from MICR to ACLS give only a total of 2mg Epi
